$$\text{Chance Probability} = (1/7)^8 \times (1/2)^2 = 1 / 23{,}059{,}204$$
$$\text{Overall Chance Probability} < 1 / 10^{50}.$$

One should weigh the possibility of design in the biblical chronology against the patterns we have observed arising by chance. Not only do the numbers argue for design, but they argue that this chronology is the correct explanation of that design. The number 1050 is immense beyond comprehension. No sane person would want to stake his life against it. God is the one who designed the chronology. Now this chronology proves that Yeshua died on the 4th day of the week and rose on the sabbath. What is the probability that God would allow an explanation of the bible's chronology to arise that could prove itself reasonably correct by probability, yet in fact was a false chronology? God does not mislead anyone by his Word. The probability is therefore ZERO.
