←2192 May 01  
Total L.E. EAE  
21.1. famine?

A year name reads: In  
the year when  
Sharkalisharri  
captured Sarlag.

EAE 21.1, Apr  
22-23, 2165, fa-  
mine?

"w.w. HALLO (1957)  
counts just 40 years  
from the last year of  
Shar-kali-sharri to Ur-  
nammu. The theory  
was still good in 2015  
(ARCANE III).

EAE 21.VI, Sep 4-5,  
2153, famine.

Akkad is  
reduced to a  
rump state.

### Ice Age Maximum Collapse

Locations are affected differently based on physical geography. Akkad gets the worst of it early. It will be called the curse of Akkad. The Empire will collapse due to desertification of once fertile lands.

Mari regains independence

Khafra artifact, an inscribed anorthosite gneiss vessel bearing the cartouche of Pharaoh Khafre, found in Ebla palace G must have been a keepsake from the reign of Khafre. It is just one more piece of evidence that Ebla II was destroyed by an Ur III alliance with an Elamite long range strike force. The artifact establishes a *terminus post quem* for Ebla's destruction.

Lagash II dynasty per ARCANE III (2015). Nammahni is the son in law of Urbawu is considered problematic, but long life spans are still possible.

The Mari Shakkanakku list continues to use the Akkadian viceroy title long after the Akkadians are gone. This may reflect the fact that Mari presented two faces, one for overlords like Ur III kings, and another face to peer kingdoms like Ebla. Both Ebla and Mari had dual lines of kings with divided diplomatic functions.

Once we realize that about 200 years were eliminated by modern interpretations of biblical chronology, the Mesopotamian dynasties fit quite nicely with the standard middle chronology and the corrected biblical chronology. I only made adjustments of four years for astronomical reasons.

### Post Akkadian Pottery Types

- Pirigme
- Lu-Baba
- Lugula

Attested at Ebla only
